

The Joomla Project announces the immediate availability of Joomla 1.5.13 [Wojmamni ama baji].

This is a security release and users are strongly encouraged to upgrade immediately.

Use **One-click update** via Software/Services > Installatron Applications Manager in your **cPanel**

This Joomla release contains 26 bug fixes, two moderate-level security fixes and one low-level security fix.

NB Unfortunately this update also INTRODUCES two new bugs:

Sincere thanks to [@hilsatlvsonline](#) on twitter who first brought our attention to the new bugs and the patches. Thank you!

The following information was abstracted from the official Joomla docs pages [HERE](#)

1. [I can not Save or Cancel articles while editing in front end](#)

If your Save or Cancel buttons are not working when editing articles through the Front End, then this might be related to the following tracker item which includes a patch already: [\[#17323 TinyMCE Editor \\$file_browser_callback error in 1.5.13\]](#)

Official and tested patch, including patch instructions are available [here](#)

Please note that if you are using another editor, JCE perhaps, then you should not have any problems with the above.

2. [What happend to the Media Manager?](#)

With the release of 1.5.13 a new bug was introduced in the back end, a view is causing a problem for the Media Manager to load successfully. You can find the related tracker item including a patch here: [\[#17319 Media Manager is broken\]](#)

Official and tested patch, including patch instructions are available [here](#)

If you have any questions about the applying the patches or want us to apply them for you then contact us via the support ticket system.
